

To Whom It May Concern,

The package in question contains laboratory specimens being transported to the USA for analysis by physicians at hospitals in Michigan and Texas. The specimens have been fixed in formaldehyde; therefore, they are deemed non-infectious. They pose no hazard to persons coming in contact with this package. The specimens have been double-bagged and there is no liquid formaldehyde. If there are any questions, please call Dr. William Walker at 269-271-0127.

Thank you very much.
